**SIZE(I)**                                                     **SIZE(I)**

NAME
    size — size of an object file

SYNOPSIS
    **size** [ object ... ]

DESCRIPTION
    *Size* prints the (decimal) number of bytes required by the text, data, and bss portions, and their sum in octal and decimal, of each object-file argument. If no file is specified, **a.out** is used.
